## **INSTALLATION GUIDELINES**

### **XAMPP**

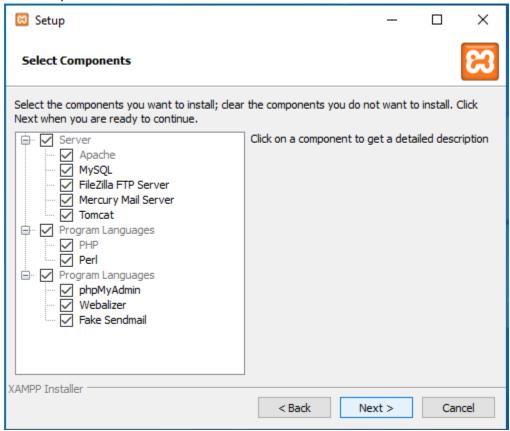

- 1. First, click the following link <a href="https://www.apachefriends.org/download.html">https://www.apachefriends.org/download.html</a> add download XAMPP which is suitable for your device.
- 2. Now, double click on the downloaded file to run the installation.
- 3. Click the OK button on the warning to continue.

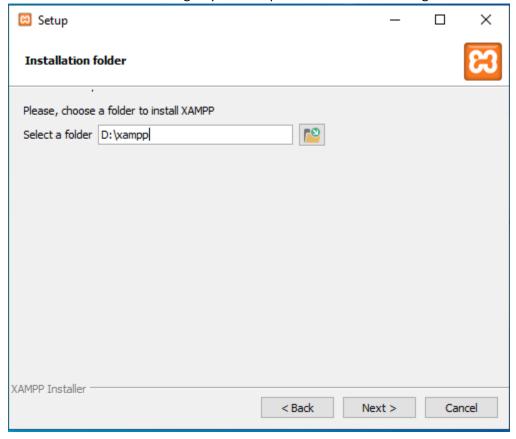

#### 4. Click the Next button.

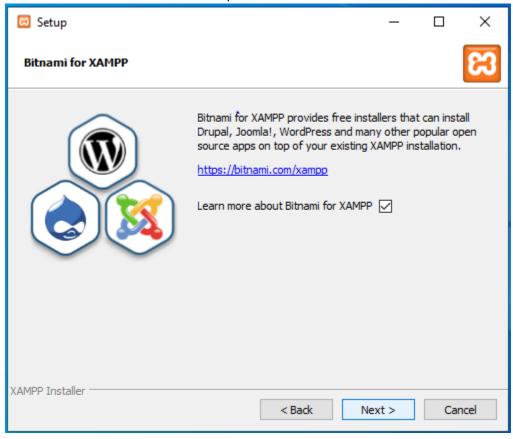

5. XAMPP offers a variety of services like Apache, MySQL, phpMyAdmin, and many more which are selected by default. It is recommended that you select everything as you will use all of them eventually and click Next.

6. Now, select the location for the installation of the software. You can either choose the default location or choose it according to your own preference. After selecting the folder click Next.

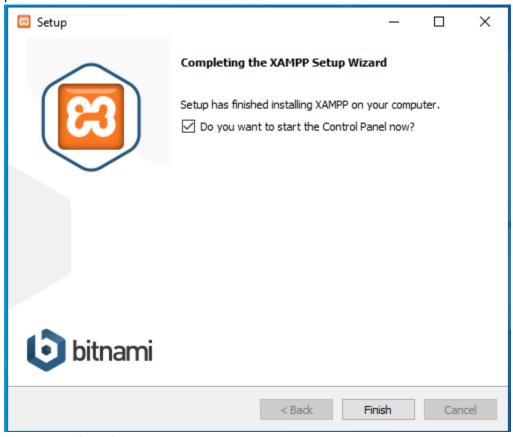

7. You will be asked if you want to learn more about bitnami which is a library of installers or software packages for web applications and solution stacks as well as virtual appliances. You can unclick the learn more checkbox and press Next.

8. Now, wait for xampp to finish installing and click Next.

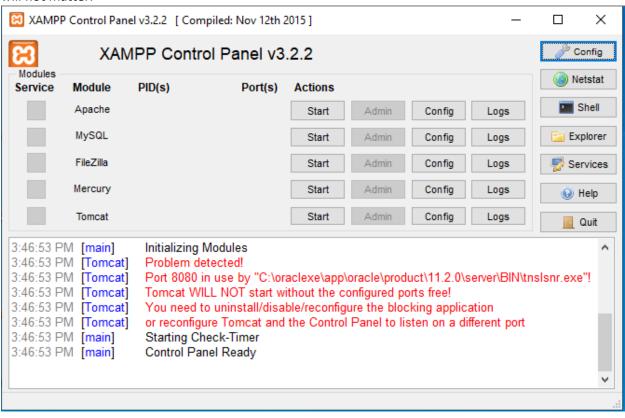

9. After the completion of installation XAMPP, it will ask you if you want to run the xampp control panel now. Leave the check box as it is and click on Finish.

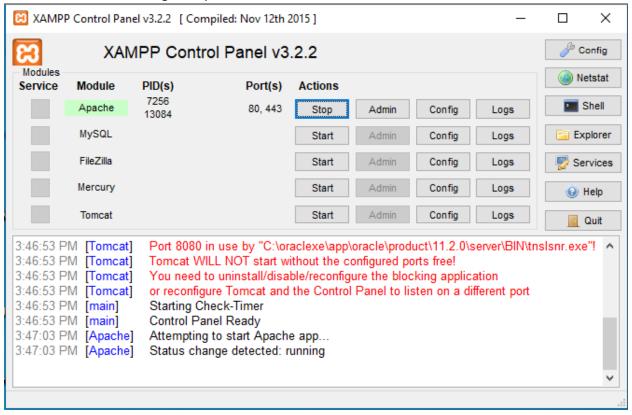

10. Click on the flag of the language you want to run. English is recommended and click on Save.

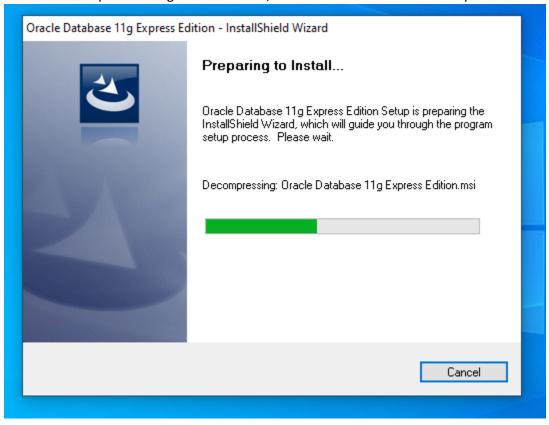

11. The Xampp control panel will start up if you had selected to start the control panel during step 9. You might receive an error telling you Tomcat will not start, but as we do not need tomcat it will not matter.

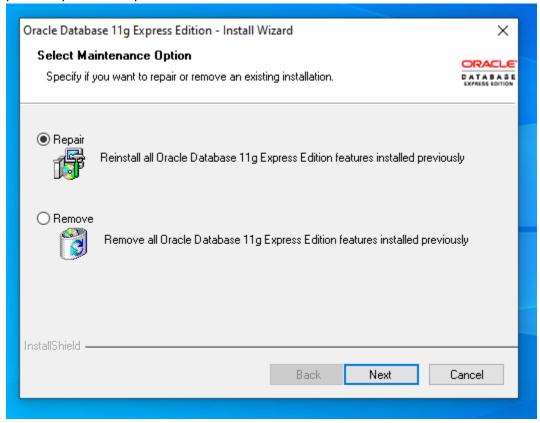

12. Click on the first Start alongside Apache to start the server.

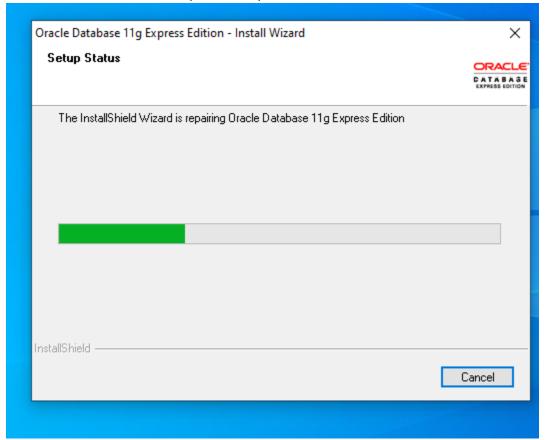

- 1. First download "Oracle Database Express Edition 11g" from https://www.oracle.com/database/technologies/appdev/xe.html.
- 2. After the download has finished double click on it to run the downloaded file.
- 3. A window will open showing the installation, wait until the installation is completed.

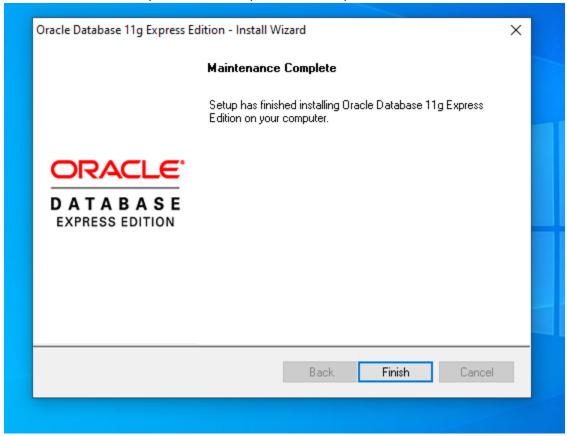

4. It will ask you if you want to repair or remove an existing installation if you already had it previously. Choose repair and click Next.

5. You will have to wait for the repair to complete.

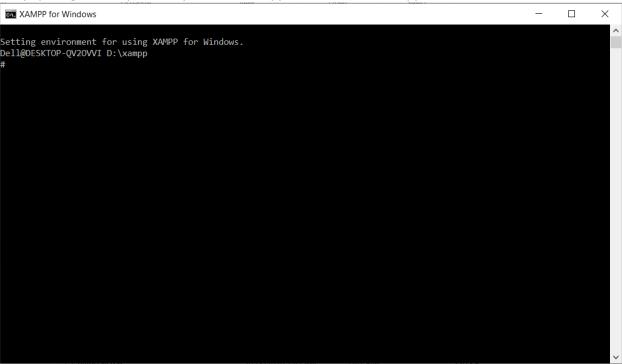

6. The window will inform you that the setup has been completed then click Finish.

## **Oracle Database Update**

1. In order to update oracle database to version 19.2 first we need to find the version number of our php, so go to the previously installed xampp folder and run 'xampp shell'.

2. Type 'php -v' to find out the version of php you are using.

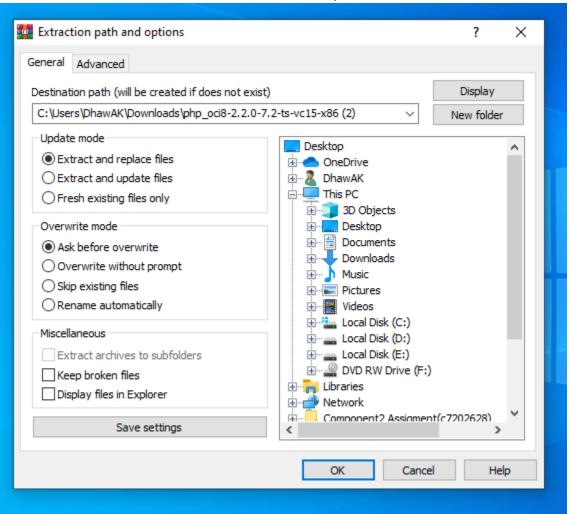

3. After finding out what version your php is go to the link <a href="https://pecl.php.net/package/oci8">https://pecl.php.net/package/oci8</a> and press the DLL link corresponding to the version of php you have. If your php version is greater than 7.1 select the DLL of version 2.2.0.

Available Releases				
Version	State	Release Date	Downloads	
2.2.0	stable	2018-12-10	oci8-2.2.0.tgz (191.8kB) ■DLL	[ Changelog ]
2.1.8	stable	2017-10-18	oci8-2.1.8.tgz (189.6kB) ■DLL	[ Changelog ]

1.4.9	stable	2012-10-22	oci8-1.4.9.tgz (165.3kB)	[ Changelog ]

4. Now, you will see a page showing the package information and a DLL list for php versions 7.1. to 7.4. Select and download a thread-safe DLL suitable to the device you are using, in our case it would be 7.2 Thread Safe (TS) x64.

	DLL List
PHP 7.4	7.4 Non Thread Safe (NTS) x64 7.4 Thread Safe (TS) x64 7.4 Non Thread Safe (NTS) x86 7.4 Thread Safe (TS) x86
PHP 7.3	7.3 Non Thread Safe (NTS) x64  7.3 Thread Safe (TS) x64  7.3 Non Thread Safe (NTS) x86  7.3 Thread Safe (NTS) x86  7.3 Thread Safe (TS) x86
PHP 7.2	7.2 Non Thread Safe (NTS) x64 7.2 Thread Safe (TS) x64 7.2 Non Thread Safe (NTS) x86 7.2 Thread Safe (NTS) x86 7.2 Thread Safe (TS) x86
PHP 7.1	7.1 Non Thread Safe (NTS) x64 7.1 Thread Safe (TS) x64 7.1 Non Thread Safe (NTS) x86 7.1 Thread Safe (TS) x86

5. Extract the downloaded files to a suitable location and open it.

6. Select and copy 2 files from the extracted folder which are php\_oci\_11g.dll and php\_oci\_11g.pdb.

9. Within the file around the line 900 you will see a bunch of extensions, at the bottom of the list type in extension=php\_oci8\_11g.dll.

```
🔚 php.ini 🗵
         extension folders as well as the separate PECL DLL download (PHP 5+).
884
         Be sure to appropriately set the extension dir directive.
886 extension=bz2
887 extension=curl
     extension=fileinfo
889 extension=gd2
890 extension=gettext
891 ; extension=gmp
892 ; extension=intl
893 ;extension=imap
894
     ;extension=interbase
895 ;extension=ldap
896 extension=mbstring
897 extension=exif
                          ; Must be after mbstring as it depends on it
898 extension=mysqli
899
     extension=oci8 12c ; Use with Oracle Database 12c Instant Client;
900 ; extension=openssl
901 ; extension=pdo firebird
902 extension=pdo mysql
903 ; extension=pdo_oci
904 ; extension=pdo_odbc
905 ; extension=pdo_pgsql
906 extension=pdo_sqlite
907 ; extension=pgsql
    ;extension=shmop
909 extension=php_oci8_11g.dll
```

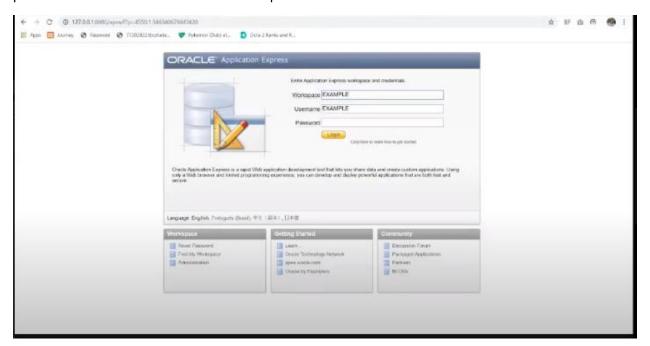

10.After dll extension was added an oracle application which we have installed was opened and it was login by providing username and password used during application installation.

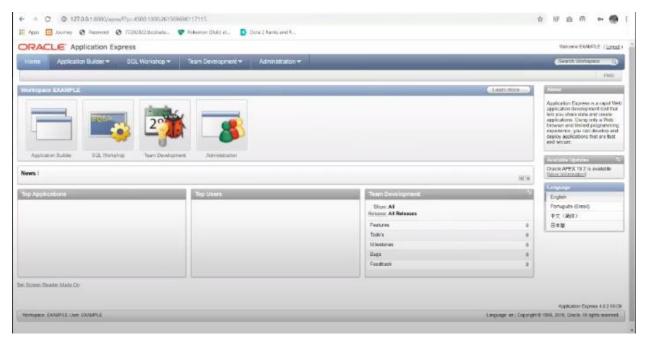

11. After it is login workspace was created which should be communicated by our php code with providing username and password.

12. After workspace is created we can sign in and open the old version of oracle with username and password which we created to make workspace

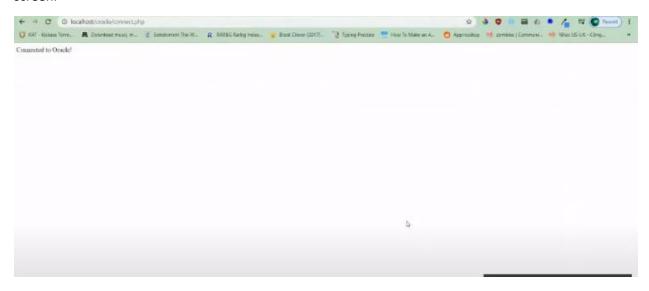

13.our application express will look this way before updating

14. After this from files provided in our drive connect.php was downloaded and saved in a folder in htdocs and was edited with workspace name and password provided in oracle in oci connect in line 1.

```

```

15.After editing connect.php it was run in localhost and connected to oracle msg was observed on screen.

- 16. Now, go to <a href="https://www.oracle.com/tools/downloads/apex-192-downloads.html">https://www.oracle.com/tools/downloads/apex-192-downloads.html</a> and download oracle APEX 19.2.
- 17. After the download has been completed extract the apex folder to the C drive.
- 18. Open command prompt and change the directory to the recently extracted apex folder.

19. Type in and enter 'sqlplus /nolog', then type 'CONNECT SYS as SYSDBA' and enter your password to connect into the database.

```

SQL>
```

20. Now, enter '@apexins SYSAUX SYSAUX TEMP /i/' to install application expressions. This process will take a few minutes.

21. After the installation has been completed repeat step 13.

22.Type '@apex\_epg\_config.sql C:\' to configure the Embedded PL/SQL Gateway (EPG). This process will also take some time.

23.If you did everything right the upgrade should have happened and you will receive the following page when you go to <a href="http://127.0.0.1:8080/apex/">http://127.0.0.1:8080/apex/</a> or double click on the previously installed oracle database.
